

FOR IMMEDIATE RELEASE

Bradley Pulverizer Accelerates UK Growth with Move to an Advanced Manufacturing and Service Facility

Sittingbourne, Kent — January 27, 2026 — Bradley Pulverizer has relocated its UK operations to a significantly larger, modernized facility in Sittingbourne, Kent UK, marking a major milestone in the company's continued investment in engineering capability, operational efficiency, and customer support for our global base of industrial clients.

"Our new facility in Sittingbourne represents a new era in Bradley Pulverizer's long and storied history. We now have complete manufacturing, testing, and design capabilities in the UK to better serve customers in Europe and the Middle East," said Curt Snyder, President & CEO of Bradley Pulverizer.

A Major Step Forward for Engineering and Production

The new 18,500-square-foot facility is significantly larger and better equipped than Bradley Pulverizer's previous UK location. The expanded footprint enables larger-scale manufacturing, rebuilds, and overhauls, supported by upgraded infrastructure including larger overhead cranes and enhanced manufacturing capabilities.

"Our previous space was simply too small for the scale of work we're now doing. We can now take on much larger equipment — including full mill assemblies that wouldn't have fit in our old facility," added Ian Hancock, Bradley Pulverizer's Vice President of Sales and Operation.

Enhanced Testing and Fabrication Capabilities

The new site also features a significantly expanded testing laboratory, offering increased flexibility for evaluating materials and processes. Custom fume cupboards support safer and more environmentally responsible testing operations, while integrated fabrication and welding resources bring all major production functions under one roof.

Expanding Partnership with Lancaster Products

The relocation coincides with Bradley Pulverizer's expanded partnership with Lancaster Products. The UK operation now serves as the official licensee for Lancaster Mixers in the UK and Europe, with plans to support full manufacturing and service capabilities for both brands. Additional information on this exciting new partnership will be forthcoming.

Looking Ahead

The new facility positions Bradley Pulverizer for continued growth while enhancing its ability to support customers across minerals, chemicals, fertilizers, and energy markets.
