

FOR IMMEDIATE RELEASE

Lancaster Products Expands Global Reach Through Licensing Agreement with Bradley Pulverizer

Lancaster, PA, USA and Sittingbourne, Kent, UK — March 26, 2026 — Lancaster Products and Bradley Pulverizer have entered into a licensing agreement authorizing Bradley Pulverizer to serve as an official distributor, manufacturer, and service provider for Lancaster Products equipment in markets outside of North America, focusing on the United Kingdom, Europe, and the Middle East.

The agreement formalizes and expands the established collaboration between the two companies and strengthens their combined ability to deliver integrated material processing solutions globally.

Under the terms of the agreement, Bradley Pulverizer is authorized to:

- Sell Lancaster Products mixing and material processing equipment
- Manufacture Lancaster equipment for international markets
- Provide service, repair, and warranty support
- Perform equipment refurbishment and rebuild services

Bradley Pulverizer has appointed a dedicated sales representative specifically trained and knowledgeable in Lancaster mixing technology to support international market development.

Bradley's recently expanded manufacturing and service facility in Sittingbourne, Kent includes a Lancaster K-1 Lab Mixer installed within its enhanced test laboratory. This capability allows international customers to conduct material testing and process validation locally, supported by Bradley's regional team and Lancaster Products' U.S.-based sales and engineering staff.

The partnership enables Lancaster Products to significantly expand its presence outside North America by leveraging Bradley Pulverizer's long-established international infrastructure and manufacturing footprint. Bradley Pulverizer has maintained sales and engineering operations in the United Kingdom since 1893 and continues to serve global markets in minerals processing, fertilizers, chemicals, and industrial materials.

“This agreement serves to build upon on the already established working relationship between both companies,” said Curt Snyder, President & CEO of Lancaster Products and Bradley Pulverizer. “I am delighted that the Bradley Pulverizer team has embraced the Lancaster Products line of equipment and am confident that the Bradley team will do a great job of representing Lancaster Products in the UK and globally.”

The licensing agreement officially went into effect on January 1, 2026.

About Lancaster Products

Lancaster Products is a U.S.-based manufacturer of high shear mixers and material processing equipment serving industries including building materials, fertilizers, ceramics, glass, chemicals, and advanced materials. The company specializes in mixing, pelletizing, and process development solutions supported by in-house manufacturing and testing capabilities.

About Bradley Pulverizer Enterprises Inc.

Bradley Pulverizer is a global manufacturer of pulverizing, air classification, and acidulation systems. Founded in 1886, Bradley provides grinding and classification solutions for customers worldwide and maintains manufacturing operations in the United States and the United Kingdom.
